

Can holes be drilled in the photovoltaic panel frame

Overview

In summary, most solar panels come with pre-drilled holes in the frame, designed to make the installation process easier and more efficient. These holes allow for secure attachment to mounting systems without compromising the performance or protective layers of the panels. Drilling metals is not very easy so care should be taken. Ideally a variable speed drill should be used, but a standard drill can be used in short bursts the L section and through the very edges of.
