

Household batteries have a shelf life

Overview

Standard NiMH batteries have an insanely high self-discharge rate, which means they drain even when sitting idle. The numbers vary, but generally, you can expect that a NiMH battery will lose 20% of its charge. NiMH batteries don't have a memory like NiCad batteries do, so there's no need to drain them completely before recharging. You shouldn't let them drain completely. If the battery is full. Some batteries (including NiMH LSB and Li-Ion) shouldn't be stored when they are completely full. They discharge faster when fully charged. It's unclear whether this applies to standard. NiMH batteries can withstand temperatures of -4F to 95F. However, it's best to keep them cool (around 40-60F). If the NiMH battery is stored at high temperatures, the rate at which self. NiMH batteries are susceptible to overcharging and overheating. Prevent this from happening by investing in a good battery charger. This will help you get the most lifespan out of them.
