

# How is China's lead-acid battery

## Overview

The United Nations Environment Programme labels Pb a “potent neurotoxin” and a “nerve poison” that globally threatens the health and intellectual development of millions of children and adults. It is a potentially lethal. Globally, Pb derives either from primary (mining) or secondary sources (recycling and refining). The vast majority of Pb (~80%) in global commerce is used to produce LABs, a. Fueled by consumer demand for inexpensive and convenient transportation, China's e-bike market is the largest in the world. The relatively lower cost of electricity compared with g. As the world's largest producer and consumer of Pb and automobiles, China's automotive market continues to expand rapidly. In 2010 alone, China produced over 18.2 million pass. Under China's landmark 2005 Renewable Energy Law, the proportion of energy generated by renewables is expected to increase dramatically over the next two decades. To mee.
