

How to charge camping solar panels

Overview

Many campers love the idea of going back to nature while camping. However, in our modern everyday lifestyles many of us enjoy using, or even rely on, electrically-powered devices. Often we want to take them. There are many different options for capturing free, renewable energy for your own use while camping. For example, have you ever let the water out of a hosepipe after it has been left on? A solar panel or similar accessory is generally used to charge up your leisure battery and it is this stored power you draw upon. Do not expect a solar panel to directly power high-power devices. Certain materials such as silicon display an unusual property, known as the photoelectric effect, so they can produce an electrical current when exposed to light. When light strikes. There are two main types of solar panel: amorphous and crystalline. The latter is then sub-divided into two further categories – Monocrystalline and Polycrystalline. Each has its own advantages.
