

Lead-acid battery side terminal

Overview

The most common sizes of sealed lead acid (SLA) batteries use Faston tabs, but some larger batteries use L terminals, while some very specialized designs use other, sometimes proprietary terminals, such as older Panasonic camcorder batteries (of the type used for VHS shoulder-mounted camcorders). Battery terminals are the used to connect a or to a single cell or multiple-cell. typically have one of three types of terminals. In recent years, the most common design was the Post, consisting of two posts in the shape of truncated cones, positioned on th. Marine batteries typically have two posts, a 3/8"-16 threaded post for the terminal, and a 5/16"-18 threaded post for the terminal. Zinc battery terminals are an environmentally friendly alternative to lead battery terminals. These types of battery terminals were designed as a result of environmental directives such as.
