

No battery either

Overview

While the cause of laptop battery errors can be rather mysterious, there are a number of ways to work out what the problem is and fix it. 1. Plug in your laptop. It's possible the battery has simply run out of juice, so before you begin panicking, attach it to a power source. Wait for at least 15 minutes, then try turning it on. Don't worry about overcharging. Depending on your version of Windows, battery error messages can appear as warning notifications in the center of the screen or small text alerts on the battery icon in the system tray. Here are some examples of how battery-related errors can appear: 1. No battery is detected. 2. Battery #1: Not present. 3. Consider replacing your battery. 4. The battery is not detected. Laptop battery not detected error messages are usually triggered by physical damage to the battery or laptop hardware, out-of-date drivers or other software, or overheating.
