

Photovoltaic panels can be installed on the roofs of buildings in the city

Overview

Solar energy installations such as solar panels can be installed on the roof, the façade, balconies or terraces or nearby structures such as roofed car parks. Local Law 92 and Local Law 94 require that the roofs of certain buildings be partially covered with green roof or solar photovoltaic electricity generating systems in accordance with the New York City Building Code. At its most basic level, a roof functions to provide protection from the elements. According to the International Energy Association (IEA), PV solar generation increased by a record 22% in 2021 and “is becoming. Ground mounted PV and rooftop PVs installation are made up of either mono/polycrystalline silicon panels, or thin film technologies like Cadmium Telluride (CdTe). Solar PVs can also be either integrated or attached to buildings. This method of harnessing solar energy is rapidly gaining popularity due to its potential for reducing electricity bills.
