

Small lithium battery RV

Overview

Lithium batteries' huge energy capacity means they last longer for each charge and are capable of easily 10 times more cycles (number of times they can be charged and discharged) than lead-acid batteries. The Ah number shows how much energy can be delivered by the battery over a period of time. So a 100Ah battery could deliver 100 Amps for 1 hour, or 20 Amps for 5 hours, or 1 Amp for 100 hours. you get the idea. Depth of Discharge refers to the % you can discharge your battery. When you reach that % you must recharge. For lead-acid batteries, you can discharge your battery to 50%. Use the battery beyond that level and you'll d. Battery lifespan can be measure in cycles – that is discharge/charge cycles a battery is capable before it's ability to deliver power diminishes and it drops below 80% of the battery's rated capacity. A lead-acid battery is normally capa. Lithium batteries extremely long lifespan and capability for a huge number of cycles means that it works out much cheaper than lead-acid batteries. Lithium batteries have so many more cycles than lead-acid batteries becaus.
