

Solar generators can be sold back

Overview

The question of whether a homeowner can sell solar power back to the utility grid is met with a clear answer: yes, it is generally possible, but the ability to do so depends entirely on local utility rules and specific regulatory policies. Net metering isn't direct selling – You're not actually selling electricity for cash, but receiving credits that reduce future utility bills. Most homeowners see \$600-1,500 in annual bill reductions rather than income payments. Location dramatically impacts profitability – With 34 states plus D. Residential solar panels typically produce more electricity than a home uses during the middle of the day, and that surplus can be. Real-time wholesale pricing programs offer superior earning potential: While fixed-rate programs provide predictability at 2-6¢/kWh, real-time wholesale programs can yield 15-25% higher annual returns, with peak summer rates reaching 25¢/kWh during high-demand periods. What is the Smart Export Guarantee?
