

Where is the battery cabinet installed

Overview

The cabinet should be installed in a place where walls and/or ceilings do not block ventilation. If ventilation holes are blocked the interior temperature of the cabinet could rise to levels that are unsuitable for battery storage. System drawings and schematics are reviewed and clearly understood. Spread forks to maximum possible width under load. The battery cabinet contains one (1) 40 A battery disconnect circuit. Cabinets may be daisy chained as shown in Figure 7 to increase the reserve time. However, a maximum system current of 30 A should be derated by 10 °C. The Integrated Battery Cabinet (IBC) systems are housed in single free-standing cabinets. Two models are available: Model IBC-S (small cabinet) and Model IBC-L (large cabinet). (0~40°C/ 32~104°F and 30-90% non-condensing humidity). Warranty will be void if the batteries fail due to other liquid is spilt or poured directly onto them. Note: A Note symbol shows the information the user or the service personnel should observe while operating the battery cabinet or conducting service work.
